

op5 Announces Global Partner TruePath Technologies, Inc. For U.S. Markets

FOR IMMEDIATE RELEASE

-August 5, 2009-Swedish OS Management IT monitoring software developer, op5, announced today their partnership alliance with American company TruePath Technologies, Inc. - one of the premier monitoring service companies in the United States.

Stockholm, Sweden--In an announcement released earlier this month by the world renowned Open Source Management monitoring software developer op5, TruePath Technologies, Inc. has become a well received partner for op5's ever expanding global markets. TruePath Technologies, Inc. (TruePath), based in Rochester, New York, is a Network and Enterprise Monitoring Service company. TruePath's specialty is identifying the best solutions for business clients by installing, configuring and managing all aspects of client enterprise monitoring. Now with the inclusion of op5's suite of OS monitoring software, TruePath has a more complete package for its Go-to-Market approach.

TruePath Technologies, Inc., a Network and Enterprise Monitoring Service company, has historically been a service company only. Tailoring to the needs of its customers large and small, TruePath would guide them through their monitoring needs without previously leading with any one particular open source software. "op5 changed our way of thinking to give the customer a choice that we feel is the leader in monitoring software," states Founder/Senior Engineer of TruePath Technologies, Douglas Mauro. "Our customers value our opinion in giving them the best services and products they desire along with a trusted relationship that speaks above the rest." TruePath felt it was time to answer the call when asked for help with choosing the best monitoring software packages with their high level of monitoring service.

" TruePath worked with us to develop a software package that gives us additional visibility into our network. TruePath was, and continues to be, a collaborative partner for Fibertech Networks. "

- J. Drew Mullin, Director of Product Management & Development, Fibertech Networks

TruePath originally reached out to op5 to help connect with clients for op5's ever expanding geographic markets. "We are extremely pleased with the partnership of TruePath Technologies. Many of our large European based customers have operations in the U.S.; the partnership will enable an enhanced service level to these U.S. corporations. Obviously the same will apply for U.S. enterprises with operations in the European region," says Fredrik Åkerström, Director of Sales/Founder op5. TruePath's Founder/Senior Engineer Douglas Mauro agrees, adding, "From our first discussions we could immediately see that our services were a perfect fit leading to an inevitable extension of our combined visions." With op5 as a monitoring software partner, TruePath will enable the IT client community to more proactively drive the optimization and reliability of their business infrastructure. In addition to op5's suite of software options, TruePath provides responsive support options including 'ease of use' ticketing system; phone, network and e-mail in the U.S. Their committed team of support specialists provides effective assistance where round the clock monitoring of critical IT infrastructure is demanded.

" Performance management is becoming increasingly important for enterprises as they seek to align their IT infrastructure with critical business processes to become more competitive and responsive to changing customer needs. "

- IDC/Lucent Technologies, HP Networking White Paper

op5, in conjunction with TruePath Technologies, provides an adaptable monitoring program that empowers clients with the capability to diminish the burden of IT infrastructure outages.

Gartner has named Swedish Open Source Management company op5 as one of six cool vendors in the global report "Cool Vendors in IT Operations 2008." Just a few examples from Gartner:

* op5 Network Management Suite was developed to manage both easy and complex heterogeneous IT-environments

* op5's builds on different open source projects - all op5 products are delivered to the customer with full access to the source code. This provides additional flexibility for customers

* op5's approach minimizes the risks associated with open source

* Deployment of op5's products is fairly less demanding in terms of time and resources

With op5's Open Source monitoring software and TruePath Technologies partnering services, clients will continue to gain valuable insight into their IT infrastructure. By uncovering problems before they affect critical business operations, companies can continue to concentrate on their day to day operations without fearing the unknown.
